

What is claimed is:

1. An electronic information display apparatus comprising:

display means for displaying an image based on electronic information at least having image information of a page space having a plurality of partitions of news items and news-item contents information associated with each of said plurality of partitions of news items;

operation means for executing information display onto said display means;

image information display control means for displaying an image of said page space image information among said electronic information onto said display means;

news-item marker display control means for displaying news-item markers each corresponding to each of said news items in said page space image information displayed on said display means in response to an operation executed through said operation means; and

news-item contents information display control means for, if desired one of said news-item markers is selected from among said displayed news-item markers by an operation executed through said operation means, displaying onto said display means an image of said news-

item contents information associated with the news-item partition in which said selected news-item marker is displayed.

2. The electronic information display apparatus according to claim 1, wherein said news-item marker display control means displays each of said news-item markers in each of said plurality of news-item partitions in said page space image information displayed on said display means.

3. The electronic information display apparatus according to claim 2, wherein said news-item marker display control means displays each of said news-item markers in the proximity of a header of each news item.

4. The electronic information display apparatus according to claim 1, wherein said operation means has a jog lever having a switch which is operated upward, downward, and in a push direction;

    said news-item marker display control means displays said news-item markers when said jog lever is switched upward or downward with a screen based on said page space image information displayed on said display means and, every time said jog lever is switched upward or downward, shifts candidate selection display to another of said news-item markers with one of them

displayed as a selection candidate; and  
said news-item contents information display control  
means, when said jog lever is switched in the push  
direction, determines that the news-item marker displayed  
as selection candidate at that moment has been selected  
and displays the news-item contents information indicated  
by said selected news-item marker onto said display means.

5. The electronic information display apparatus  
according to claim 1, wherein said operation means has a  
zoom-in button and a zoom-in display control means which,  
when said zoom-in button is pressed with an image of said  
news-item contents information displayed on said display  
means by said news-item contents information display  
control means, displays said image of said news-item  
content information in a magnified manner.

6. The electronic information display apparatus  
according to claim 1, wherein said display means has two  
display screens and

    said image information display control means  
    displays images of said page space image information onto  
    said two display screens in a two-page spread manner.

7. The electronic information display apparatus  
according to claim 6, wherein said news-item contents  
information display control means displays said image of

said news-item contents information onto one of the two display screens of said display means, which is other display screen from the display screen on which said news-item markers are displayed.

    8. The electronic information display apparatus according to claim 6, wherein said operation means has a page-turning button and

        said image information display control means, when said page-turning button is pressed, sequentially displays the images of the subsequent page space image information onto said two display screens in a two-page spread manner.

    9. The electronic information display apparatus according to claim 1, wherein said display means has one display screen and

        said news-item contents information display control means displays a window in one portion of said display screen in said display means and displays an image of said news-item contents information into said window.

    10. The electronic information display apparatus according to claim 1, wherein said electronic information is captured from a semiconductor memory.

    11. The electronic information display apparatus according to claim 1, wherein said electronic information

is captured via a network.

12. The electronic information display apparatus according to claim 1, wherein said electronic information display apparatus is a display apparatus of a mobile information terminal apparatus.

13. The electronic information display apparatus according to claim 1, wherein said electronic information display apparatus is a display apparatus of an electronic book.

14. An electronic information display method comprising the steps of:

image information displaying step for displaying, among electronic information at least having image information of a page space having a plurality of partitions of news items and news-item contents information associated with each of said plurality of partitions of news items, an image of said page space image information onto display means;

news-item marker display control step for displaying news-item markers each corresponding to each of said news items in said page space image information displayed on said display means in response to an operation executed through operation means; and

news-item contents information display control step

for displaying, if desired one of said news-item markers is selected from among said plurality of displayed news-item markers by an operation executed through said operation means, onto said display means an image of said news-item contents information associated with the news-item partition in which said selected news-item marker is displayed.

15. The electronic information display method according to claim 14, wherein the news-item marker display control step displays each of said news-item markers in each of said plurality of news-item partitions in said page space image information displayed on said display means.

16. The electronic information display method according to claim 15, wherein the news-item marker display control step displays each of said news-item markers in the proximity of a header of each news item.

17. The electronic information display method according to claim 14, wherein said operation means has a jog lever having a switch which is operated upward, downward, and in a push direction;

the news-item marker display control step displays said plurality of news-item markers when said jog lever is switched upward or downward with a screen based on

said page space image information displayed on said display means and, every time said jog lever is switched upward or downward, shifts candidate selection display to another of said news-item markers with one of them displayed as a selection candidate; and

    the news-item contents information display control step, when said jog lever is switched in the push direction, determines that the news-item marker displayed as selection candidate at that moment has been selected and displays the news-item contents information indicated by said selected news-item marker onto said display means.

18. The electronic information display method according to claim 14, wherein said operation means has a zoom-in button and a zoom-in display control step which, when said zoom-in button is pressed with an image of said news-item contents information displayed on said display means by the news-item contents information display control step, displays said image of said news-item content information in a magnified manner.

19. The electronic information display method according to claim 14, wherein said display means has two display screens and

    the image information display control step displays images of said page space image information onto said two

display screens in a two-page spread manner.

20. The electronic information display method according to claim 19, wherein the news-item contents information display control step displays said image of said news-item contents information onto one of the two display screens of said display means, which is other display screen from the display screen on which said news-item markers are displayed.

21. The electronic information display method according to claim 19, wherein said operation means has a page-turning button and

the image information display control step, when said page-turning button is pressed, sequentially displays the images of the subsequent page space image information onto said two display screens in a two-page spread manner.

22. The electronic information display method according to claim 14, wherein said display means has one display screen and

said news-item contents information display control step displays a window in one portion of said display screen in said display means and displays an image of said news-item contents information into said window.

23. A computer-readable program for having a

computer execute the steps of:

image information displaying step for displaying, among electronic information at least having image information of a page space having a plurality of partitions of news items and news-item contents information associated with each of said plurality of partitions of news items, an image of said page space image information onto display means;

news-item marker display control step for displaying news-item markers each corresponding to each of said news items in said page space image information displayed on said display means in response to an operation executed through operation means; and

news-item contents information display control step for displaying, if desired one of said news-item markers is selected from among said displayed news-item markers by an operation executed through said operation means, onto said display means an image of said news-item contents information associated with the news-item partition in which said selected news-item marker is displayed.

24. A recording medium recording a computer-readable program for displaying electronic information, said program has computer execute the steps of:

image information displaying step for displaying, among electronic information at least having image information of a page space having a plurality of partitions of news items and news-item contents information associated with each of said plurality of partitions of news items, an image of said page space image information onto display means;

news-item marker display control step for displaying news-item markers each corresponding to each of said news items in said page space image information displayed on said display means in response to an operation executed through operation means; and

news-item contents information display control step for displaying, if desired one of said news-item markers is selected from among said displayed news-item markers by an operation executed through said operation means, onto said display means an image of said news-item contents information associated with the news-item partition in which said selected news-item marker is displayed.
